

Three observable trends based on the data for Pymaceuticals

- 1) There two drugs that was effective against Tumor and they are Capomulin and Ramicane. Mice that were using those two drugs had the highest survival rate.
- 2) All of the other drugs were ineffective against Cancer. Mice that were using those eight other drugs had a positive tumor change in the 45 day trial period.
- 3) The error bars do not provide any significant information on the overall effectiveness of the drugs.
