Three observable trends based on the data for WeatherPy

1) Cities that are closer to the equator (latitude closer to 0) tend to have warmer temperatures around this time of the year (Oct-2018).
2) Cities that are north of the equator (positive latitudes) tend to have colder temperatures around this time of the year (Oct-2018).
3) No general trends can be determined from cloudiness and latitude around this time of the year (Oct-2018)
